UVM MODIFIED LISTERIA ENRICHMENT BROTH (7409)

**Intended Use**
UVM Modified Listeria Enrichment Broth is used for the selective enrichment of *Listeria* spp.

**Product Summary and Explanation**
*Listeria monocytogenes*, described first in 1926 by Murray, Webb, and Swann, is an extensive problem in public health and food industries. This organism has the ability to cause human illness and death, particularly in immunocompromised individuals and pregnant women. Epidemiological evidence from outbreaks of listeriosis has indicated that the principle route of transmission is via the consumption of foodstuffs contaminated with *Listeria monocytogenes*. Implicated vehicles of transmission include turkey frankfurters, coleslaw, pasteurized milk, Mexican style cheese, and pâté. *Listeria* spp. are ubiquitous in nature, being present in a wide range of unprocessed foods as well as in soil, sewage, and river water.

UVM Modified Listeria Enrichment Broth is a modification of the formula described by Donnelly and Baigent. This formula is used for the selective enrichment of *Listeria* spp. from food and clinical specimens. *Listeria* spp. grow over a pH range of 5.0 - 9.6, and survive in food products with pH levels outside these parameters. *Listeria* spp. are microaerophilic, Gram-positive, asporogenous, non-encapsulated, non-branching, short, motile rods. Motility is pronounced at 20°C. Identification of *Listeria* is based on successful isolation of the organism, biochemical characterization, and serological confirmation.

**Principles of the Procedure**
Enzymatic Digest of Casein, Enzymatic Digest of Animal Tissue, Beef Extract, and Yeast Extract provide nitrogen, vitamins, and minerals in UVM Modified Listeria Enrichment Broth. The Phosphates are the buffering agents, Sodium Chloride maintains osmotic balance. Nalidixic Acid inhibits growth of Gram-negative organisms. Acriflavin inhibits Gram-positive bacteria. Esculin is hydrolyzed by *Listeria* spp. A blackening of the medium by cultures containing esculin-hydrolyzing bacteria is the result of the formation of 6, 7-dihydroxycoumarin that reacts with the ferric ions. The high salt tolerance of *Listeria* is used as a means to inhibit growth of enterococci.

**Final pH:** 7.2 ± 0.2 at 25°C

Formula may be adjusted and/or supplemented as required to meet performance specifications.

**Precautions**
1. For Laboratory Use.
2. IRRITANT. Irritating to eyes, respiratory system, and skin.

**Directions**
1. Dissolve 52 g of the medium in one liter of purified water.
2. Heat with frequent agitation to completely dissolve the medium.
3. Autoclave at 121°C for 15 minutes.

**Quality Control Specifications**

**Dehydrated Appearance:** Powder is homogeneous, free flowing, and light tan.

**Prepared Appearance:** Prepared medium is very slightly opalescent, green-yellow to yellow with faint opalescent greenish ring at the surface.
Expected Cultural Response: Cultural response in UVM Modified Listeria Enrichment Broth at 30°C after 24 - 48 hours incubation.

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure
The U.S.D.A. 8 method involves enrichment of the specimen in UVM Modified Listeria Enrichment Broth (one part sample in nine parts broth) at 30°C. After incubation, a portion of the enrichment mixture is added to an enrichment broth or plated onto the final isolation agar. 7 Refer to appropriate references for further information on testing food samples or clinical specimens. 7-9

Results
Refer to appropriate references and procedures for results.

Storage
Store the sealed bottle containing the dehydrated medium at 2 - 30°C. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.

Expiration
Refer to the expiration date stamped on the container. The dehydrated medium should be discarded if it is not free flowing, or if the color has changed from the original light tan. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure
1. Due to nutritional variation, some strains may grow poorly or fail to grow on this medium.
2. *Listeria* spp., other than *Listeria monocytogenes*, can grow on isolation media. An identification of *Listeria monocytogenes* must be confirmed through biochemical and serological testing. 10

Packaging
UVM Modified Listeria Enrichment Broth Code No. 7409A 500 g 7409B 2 kg 7409C 10 kg
